**Level above which ground is expected to be frozen/snow is expected to settle.*

Met Office Aberdeen Meteorologist's View

A very treacherous morning across all ranges with heavy, drifting snow and storm force winds. Speeds may reach 100 mph or so across the Nevis ranges for a time. A thaw of lying snow is likely for a time in the afternoon as freezing levels start to rise, so burns and paths at lower levels may see some flooding. Freezing levels may rise to 1200 to 1500 metres in the afternoon before dropping back to 800 metres in the evening.

Forecast for Thursday 28 Dec 2023

Weather: Mostly cloudy with some showers or longer spells of rain, with snow above 700 metres or so. Turning drier from the north in the evening. Cold summit winds.

Maximum wind: Southerly 25 mph with gusts to 35 mph

Chance of cloud-free hill tops above 800m: 40%, best chance in the morning in the north of the area

Low Cloud and visibility: Very good outside of cloud and precipitation. Areas of cloud between 600 and 900 metres, this most extensive in the afternoon.

Temperature: **Glens:** Minus 1 rising to 4 Celsius
At 800m: Plus 1 Celsius
Freezing level: 900 metres
